a
Acquired rights (AR), 2026–2050 (Reference 5.36)
(i) SOS/I_glob pair C: 1 W/m² planetary boundary (Bjørn & Hauschild 2015)
10.12 (+88.6%)
(iii) AR base window 1992-2025 (full consistent history)
7.51 (+40.0%)
(iii) AR base window 2006-2025 (20 yr)
6.65 (+23.9%)
(vi) Frozen technology: 2025 factors held (A1-A3 and A4-A5 not decarbonised)
6.13 (+14.3%)
(xiii) Accounting: instant (soil at conversion, B of each window's own cohorts (MODEL v3.0.0)); base on the same rule
4.63 (-13.7%)
(xii) Whole life at construction, soil at conversion (base on the same rule)
4.71 (-12.2%)
(xi) Event timing: interval L / n (instead of L / (n + 1))
4.81 (-10.3%)
(xiii) Accounting: cohort_window (soil oxidised over 20 yr, each window's own cohorts only); base on the same rule
4.87 (-9.2%)
(iv) NZ population: WPP 2024 probabilistic median, New Zealand
5.70 (+6.2%)
(iii) AR base window 2021-2025 (5 yr, as Horup)
5.13 (-4.4%)
(viii) NZ-made, electricity-intensive items held at 2025 (A1-A3)
5.47 (+1.9%)
(ix) A4-A5 held at 2025 (no generic 1%/yr)
5.46 (+1.7%)
(x) A4-A5 on each item's own Horup S4 path
5.32 (-0.9%)
(vii) Proxy-mapped items held at 2025 (A1-A3)
5.39 (+0.5%)
(iv) NZ population: raw Stats NZ 2024-base median (no 2025 observation, no nowcast)
5.35 (-0.2%)
(xiv) AtP with alpha = 1, as computed in Hjalsted et al.'s SI tables
5.36 (+0.0%)
(v) s_sec with FCE share as ratio of sums
5.36 (+0.0%)
(ii) GDP per capita, current US$ (NY.GDP.PCAP.CD), b = 2024
5.36 (+0.0%)

b
Ability to pay (AtP), 2026–2050 (Reference 23.49)
(ii) GDP per capita, current US$ (NY.GDP.PCAP.CD), b = 2024
72.27 (+207.7%)
(i) SOS/I_glob pair C: 1 W/m² planetary boundary (Bjørn & Hauschild 2015)
44.31 (+88.6%)
(xiv) AtP with alpha = 1, as computed in Hjalsted et al.'s SI tables
9.91 (-57.8%)
(xiii) Accounting: cohort_window (soil oxidised over 20 yr, each window's own cohorts only); base on the same rule
17.60 (-25.1%)
(xiii) Accounting: instant (soil at conversion, B of each window's own cohorts (MODEL v3.0.0)); base on the same rule
18.52 (-21.1%)
(vi) Frozen technology: 2025 factors held (A1-A3 and A4-A5 not decarbonised)
26.84 (+14.3%)
(xii) Whole life at construction, soil at conversion (base on the same rule)
26.30 (+12.0%)
(xi) Event timing: interval L / n (instead of L / (n + 1))
21.07 (-10.3%)
(iv) NZ population: WPP 2024 probabilistic median, New Zealand
25.30 (+7.7%)
(viii) NZ-made, electricity-intensive items held at 2025 (A1-A3)
23.94 (+1.9%)
(ix) A4-A5 held at 2025 (no generic 1%/yr)
23.89 (+1.7%)
(x) A4-A5 on each item's own Horup S4 path
23.28 (-0.9%)
(iv) NZ population: raw Stats NZ 2024-base median (no 2025 observation, no nowcast)
23.35 (-0.6%)
(vii) Proxy-mapped items held at 2025 (A1-A3)
23.61 (+0.5%)
(v) s_sec with FCE share as ratio of sums
23.54 (+0.2%)
(iii) AR base window 1992-2025 (full consistent history)
23.49 (+0.0%)
(iii) AR base window 2021-2025 (5 yr, as Horup)
23.49 (+0.0%)
(iii) AR base window 2006-2025 (20 yr)
23.49 (+0.0%)
